📍 Tran Binh Trong, District Binh Thanh

SUMMARY

Final-year student focused on DevOps/Cloud. I turn manual workflows into secure, observable CI/CD pipeline and favor reliability, fast releases, and shift-left security. Hand-ons with AWS, Kubernetes, Terraform, Jenkins, and GitOps.

EDUCATION

B.S. Computer Networks & Data Communication
(Expected Jun 2026)

University of Information Technology (VNU-HCM, UIT)

📅 2022 - Present 📍 Thủ Đức, Hồ Chí Minh

GPA

3.5 / 4.0

ACADEMIC EXPERIENCE

Octaltask - Building and deploying a task management web application using microservices and DevOps

University of Information Technology - VNU HCM

📅 02/2022 - 06/2022 📍 Thu Duc, Ho Chi Minh

🔗 <https://github.com/RibunLoc/DevOps-task-management-web-platform>

Role: DevOps & Cloud

Responsibilities: Provisioned cloud infrastructure with Terraform; set up CI/CD in Jenkins; adopted GitOps using ArgoCD; Implemented monitoring with Prometheus and Grafana; secured secrets with Vault; configured AWS Application Load Balancer and user Cloudflare as DNS/CDN.

Tech stack: Docker, Kubernetes (EKS), Helm, Terraform, Jenkins, ArgoCD, SonarQube, Trivy, Snyk, Prometheus, Grafana, Vault, AWS (IAM, S3, ALB, EC2), Longhorn, Git

Muzique - Building and deploying a music web application

University of Information Technology - VNU HCM

📅 03/2022 - 05/2022 📍 Thủ Đức, Hồ Chí Minh

Developed a music streaming system with **microservices architecture**, featuring a **Go backend** and **React + Vite frontend**, deployed via **AWS ECS with 4 members**.

- Designed a full CI/CD pipeline using Jenkins detected service changes, performed code analysis with SonarQube, security scans with Trivy, and automated Docker image build & push.
- Updated ECS task definition using jq, injected environment variables securely via AWS Secrets Manager, and managed deployment revisions.
- Assisted in frontend integration and containerization, ensuring consistent deployment across environments.

Project Calico - Zero Trust Network Policy on Kubernetes

University of Information Technology - VNU HCM

📅 03/2022 - 04/2022 📍 Thu Duc, HCM

🔗 https://github.com/RibunLoc/ProJect_Calico

Deployed Calico CNI with VXLAN & WireGuard on 3-node Minikube. Built Zero Trust NetworkPolicy; monitored blocked traffic via Loki & Grafana.

- Deployed Calico CNI on a 3-node Minikube cluster via Tigera Operator, and enabled WireGuard encryption for node-to-node traffic.
- Designed and implemented a Zero Trust NetworkPolicy: enforced default deny within namespace, allowing only trusted-client to access app-secure (nginx).
- Set up an observability stack: logs collected using Opentelemetry Collector, stored in Loki, visualized with Grafana, and verified through LogQL queries.

SKILLS

Programming Skills

Go, C/C++, Bash, YAML

Container & Orchestration

Docker, Kubernetes, Helm, Calico,

Linux & System

Linux (Ubuntu), Networking Fundamentals

CI/CD & GitOps

Jenkins, Git, ArgoCD, Snyk, Trivy, SonarQube, Harbor

Cloud & Infra as Code

AWS - EC2, ECS, EKS, VPC
Cloudflare(DNS/CDN), Terraform.

Databases & Cache

MySQL, MongoDB, PostgreSQL, Redis, Longhorn

Secrets & Observability

Vault, Prometheus, Grafana, Loki, OpenTelemetry

Soft skills

Continuous Learning, Communication,

CERTIFICATION

Toeic Listening & Reading

570

Toeic Speaking & Writing

230
