

HO THANH LOC

DevOps Engineer Intern

(+84) 969-398-444 • hothanhloc12345@gmail.com • github.com/RibunLoc • linkedin.com/in/lộc-hồ-86527637a
• Binh Thanh, Ho Chi Minh

Summary

Final-year Computer Network student with focus on DevOps and cloud computing. Experienced in transforming manual workflows into automated, secure CI/CD pipeline using AWS, Kubernetes, Terraform, Jenkins, and GitOps. Aiming to speed up releases, improve reliability, and apply security to enhance software quality and operational efficiency.

Education

University of Information Technology (VNU-HCM, UIT) Ho Chi Minh, Viet Nam
B.S. Computer Networks & Data Communication | GPA: **8.0** / 10 2022 - Present

Certification

Toeic — 570 (Listening & Reading), 230 (Speaking & Writing), 2024

Skills

Programming Skills: Go, C/C++, Bash

DevOps: Docker, Kubernetes, Helm, Longhorn, Jenkins, Git, Argo CD, SonarQube, Snyk, Trivy

Cloud & IaC: AWS (EC2, ECS, EKS, VPC), Terraform, Cloudflare.

System & Monitoring: Linux, Networking Fundamental, Vault, Prometheus, Grafana, Loki, OpenTelemetry.

Experience

Octaltask - Building and deploying a task management web application using microservices and DevOps

<https://github.com/RibunLoc/DevOps-task-management-web-platform> 03/2025 - 06/2025

Octaltask: microservices task-management platform (NestJS + React/Vite) with end-to-end DevOps to ship faster, more reliably, and at scale.

- IaC: Provisioned AWS infra (VPC, EKS, ALB, S3, DynamoDB) with Terraform/Helm; automated EKS setup with ALB, Argo CD, Longhorn, Prometheus, Grafana.
- CI/CD: Built Jenkins pipelines for 5 microservices with per-service detection, parallel builds, image packaging, tag management, and vulnerability scans (SonarQube, Snyk, Trivy).
- GitOps: Managed deployments via ArgoCD with Vault secret injection and auto-sync to EKS.
- Observability & Security: Implemented monitoring (Prometheus, Grafana), secret management (Vault), storage (Longhorn), and Cloudflare DNS/CDN.

Muzique - Building and deploying a music web application using microservices and Elastic Container Service

03/2025 - 05/2025

- Developed a microservices-base music streaming system (Go backend, React + Vite frontend) deployed on AWS ECS with a 4 member team.
- Built a Jenkins CI/CD pipeline with service change detection, code quality & security scans, automated Docker image build/push, and ECS deployment update vi jq, AWS Secret Manager.
- Integrated frontend containerization, ensuring consistent deployments across environments.

Project Calico – Kubernetes Networking & Security

https://github.com/RibunLoc/Project_Calico 03/2025 - 05/2025

- Implemented Calico CNI in a 3-node Kubernetes cluster to enforce Zero-Trust Network Policies.
- Designed policies to allow on trusted pods to access critical services (PostgreSQL DB), while blocking attacker pods.
- Enabled WireGuard encryption for pod-to-pod traffic to ensure data confidentiality.
- Integrated OpenTelemetry, Loki, Grafana to collect logs and visualize blocked/allowed traffic in realtime.
